PRESS RELEASE

Mountune Performance Focus Zetec S MP200

AUTOSPORT, Birmingham, 15th January, 2012. Mountune Performance, the road car performance division of Revolve Technologies has today unveiled its first product to feature Ford's new Ecoboost turbocharged engine technology.

The new MP200 kit is based on the 1.6-litre variant of the Ecoboost family as featured in the newly released Focus Zetec S and features a new larger capacity alloy intercooler and re-calibrated engine control module.

Due for release in Q2 of 2012, the target power output is 200PS with 320Nm torque - a significant uplift to the Zetec S model's 180PS, 270Nm credentials. Although developed to partner the recently released range-topping Zetec S derivative, the MP200 upgrade will also be compatible with all Focus 1.6-litre Ecoboost models, including the 150PS variants.

Mountune's Performance Engineering Manager, David Jones said; "Our extensive research and development of Ford's Ecoboost Global Race Engine, combined with our road car expertise means we can offer customers the ultimate Ecoboost performance products, whilst in the majority of cases maintaining their base vehicle warranty. The Focus Ecoboost MP200 kit heralds the first of many Ecoboost-powered products that will join the Mountune product line-up in 2012."

The model shown also features a Ford Racing inspired livery, lightweight alloy wheels and Eibach lowering springs.
